

Dotmatics has licensed its browser solution to Boehringer Ingelheim, Germany

Bishop's Stortford, 1st February 2010 – Scientific software company Dotmatics Limited (Dotmatics) is pleased to announce that Boehringer Ingelheim has licensed Browser and Vortex. The solution will be used to query, browse and analyze key drug discovery information across research programs and project teams.

Key features of interest to Boehringer Ingelheim included:

- configurable against multiple chemistry cartridges simultaneously
- editable mode in Browser to enable users to guide project decisions
- zero-client install version of Vortex to ease large scale deployment

Dotmatics' solutions offer the following advantages:

- The use of a zero-client web based approach provides our clients with real-time access to information and reduces IT support overhead.
- Integration with pre-existing informatics tools such as electronic lab notebooks, chemical & biological databases and inventory management.
- An easy-to-use interface allows scientists to make the most of the powerful querying, visualisation and analysis capabilities of the tools, with minimal training.
- High performance indexing and searching of large chemical structure databases including proprietary and commercial compound sources.

Steve Gallagher, Director at Dotmatics, said: "This agreement represents a significant milestone for Dotmatics. In addition to Boehringer Ingelheim, Dotmatics is working with many of the top pharma as well as biotechs of all sizes. We are delighted to be working in partnership with them to continue to expand their use of our tools and services."

About Dotmatics

Dotmatics is a scientific software company deploying web-based knowledge solutions that dramatically improve the way scientific data is queried, browsed, managed and shared within companies. Dotmatics has significant expertise in cheminformatics techniques including chemical databases, SAR analysis, data management and data visualization. A privately-owned company, Dotmatics was founded in 2005 and is based south of Cambridge, UK.

Browser is a query and visualisation tool for biological and chemical datasets.

Pinpoint¹ is an Oracle cartridge allowing rapid indexing and searching of chemical databases.

Gateway is a centralised depot for sharing information with colleagues and external collaborators.

Vortex is an advanced visualisation and analytics tool for scientific and non-scientific data.
